

讲座内容:

This talk presents cascaded multilevel converters and modular multilevel converters, or more strictly, modular multilevel cascade converters in a broad sense. Special attention is paid to circuit topology and control strategy, along with their applications to grid connections and motor drive systems. This speaker turns on a modular multilevel converter, or more strictly, a modular multilevel double-star chopper-cell (DSCC) converter that attracts the most attention among the six modular multilevel cascade converter family members. Finally, the speaker presents three downscaled motor **Existingly all the left left that the speaker** presents three downscaled motor **Existingly all the left left left that the speaker** presents three downscaled motor **Existingly all the speaker** presents and the speaker presents all the speaker presents and the speaker presents and the speaker presents all the speaker presents are speaker presents and the speaker presents are speaker
